1. Transmittal of the translation to the applicant.

The International Bureau transmits herewith a copy of the English translation made by the International Bureau of the international preliminary examination report established by the International Preliminary Examining Authority.

2. Transmittal of the copy of the translation to the elected Offices.

The International Bureau notifies the applicant that copies of that translation have been transmitted to the following elected Offices requiring such translation:

None

The following elected Offices, having waived the requirement for such a transmittal at this time, will receive copies of that translation from the International Bureau only upon their request:

EP, JP, US

3. Reminder regarding translation into (one of) the official language(s) of the elected Office(s).

The applicant is reminded that, where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report.

It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned (Rule 74.1). See Volume II of the PCT Applicant's Guide for further details.

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1-7	YES
	Claims		NO
Inventive step (IS)	Claims	1-7	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-7	YES
	Claims		NO

2. Citations and explanations

The closest prior art (corresponding to the preamble of claim 1) is known from EP-A-0776719.

Problem and solution:

The problem addressed by the present application is that of improving the known generic tool so that the cutting element can be changed more quickly and with greater precision, and also so that the machining forces generated during the machining operation are reliably directed into the mounting so that greater machining precision can be achieved.

The combination of features proposed in claim 1, in particular the inclined surface (50) and the screw thread (54) in the recess that co-operates with the inclined surface on the tool, ensures a simple and reliable zero-backlash connection between the tool and the mounting, thereby solving the problem of interest. The solution is novel and cannot be derived in an obvious way from the cited documents.

The subject matter of claim 1 is industrially applicable.

The subject matter of claims 2 to 7 is novel, inventive and industrially applicable by virtue of the dependence of said claims on claim 1.
